(54) DATA COMMUNICATION NETWORK SYSTEM

(57)Abstract:

PURPOSE: To eliminate the display faults of a display and the output faults of an output device which are caused by the difference of character codes which are used by the different devices connected to a network.

CONSTITUTION: The data communication network system consists of a communication circuit 2, plural information processors 5 which are connected to the circuit 2, and a server 1 which controls the processors 5. The server 1 is provided with a means which adds the font image data on the characters registered in a font data base 11 or the character code corresponding to a substitute character to the character code that is not prepared by the processor 5 of the receiver side based on a conversion control table 12 when plural character codes sent from the processor 5 of the transmitter side into the character code used by the processor 5 of the receiver side by a code converter 3 and then transmits these added character codes.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
